

# Pure Water Technology Carbon Filtration

## Carbon Filtration and Sparkling Water

To achieve optimum effervescence in sparkling water, it is recommended to use the carbon filtration method shown below. Water pressure range should be between 25-60 psi.

The Wellsys carbon filtration has four filters:

## Hot tank descaling

The hot tank is subject to scale build up based on the water quality. Regular descaling is recommended to maintain the function of the hot tank. Please refer to instructions for descaling the hot tank.
