

# Reverse Osmosis for S4 Sparkling Unit

## Reverse Osmosis

In areas where TDS exceeds 300ppm, it is recommended to use Reverse Osmosis. Mineral addback is important for sparkling quality.

## Checklist for RO applications

- Water supply is between 60-80psi
- Minimum line pressure of bladder tank is 25 psi
- Drain access within 50 feet
- Minimum of a 6-gallon bladder tank

## Checklist for properly functioning RO system

- 60-80psi
- Correctly install the drain line to the filter
- Properly flush the RO system
- Correctly install the bladder tank
